

New owner for Endat Oy

In the beginning of April 2007 the German based Clyde Bergemann GmbH has acquired 100% of the Endat Oy. Clyde Bergemann GmbH is member of the Clyde Bergemann Power Group and world leading in 'On-Load' boiler cleaning technology.

Endat will continue its operations as a Finnish company and keep its premises in Otaniemi, Espoo. Prof. Carl-Johan Fogelholm continues as the managing director of the company. The key staff Antti Komulainen and Sami Mäkinen stays with the company as well and will also in the future be responsible for product development and customers service.

Endat's Prosim based process simulation technology will be integrated into Clyde Bergemann's SMART Clean Intelligent Sootblowing Platform. Endat's extensive knowledge and experience in on-line condition monitoring, that was developed over the years among others together with Foster Wheeler Energia Oy and Vattenfall, will significantly enhance Clyde Bergemann's on-line condition monitoring capabilities.

The change in ownership gives Endat a save and stable future as a leading provider for process simulation software. It will enable us to further develop the well-known Prosim product family and guarantee our well-known services to you also in the future.

We hope to continue our excellent collaboration with you and are looking forward hearing from you in the near future!

Carl-Johan Fogelholm

Antti Komulainen
